Hardware/Software Co-Design for Data Flow Dominated Embedded Systems

Ralf Niemann

Hardware/Software Co-Design for Data Flow Dominated Embedded Systems Ralf Niemann

Many of the modern applications of microelectronics require huge amounts of computations. Despite all recent improvements in fabrication technologies, some of these computations have to be performed in hardware in order to meet deadlines. However, controlling computations by software is frequently preferred due to the larger flexibility. Hence, in general, modern applications require a mix of software-based and hardware-based computations. Applications using this mix can be designed with the help of hardware/software co-design systems. Many such co-design systems have been described so far (references can be found in this book), but many of these are based on heuristics. In this book, Niemann describes a co-design system which is based on sound modeling techniques. This system has the following salient features:

- Precise cost and performance figures Design decisions for implementing a certain function in hardware or software are based on 'cost and performance figures for the different design alternatives. Hence, good designs can only be expected if these figures are accurate. In order to achieve excellent accuracy, Niemann takes a new approach: the cost of software implementations is derived from the data available about the target processors and from knowledge about the code size. the performance of software implementations is computed by compiling the given function and then using static analysis for computing worst case execution times. the cost of hardware implementation is estimated by running higher-level synthesis tools. the performance of hardware implementations is again computed by using static analysis.

From reader reviews:

John Carter:

Now a day people who Living in the era just where everything reachable by match the internet and the resources inside it can be true or not demand people to be aware of each info they get. How people have to be smart in getting any information nowadays? Of course the answer then is reading a book. Studying a book can help individuals out of this uncertainty Information mainly this Hardware/Software Co-Design for Data Flow Dominated Embedded Systems book since this book offers you rich facts and knowledge. Of course the info in this book hundred % guarantees there is no doubt in it you probably know this.

Steven Dillinger:

The feeling that you get from Hardware/Software Co-Design for Data Flow Dominated Embedded Systems could be the more deep you excavating the information that hide into the words the more you get interested in reading it. It doesn't mean that this book is hard to recognise but Hardware/Software Co-Design for Data Flow Dominated Embedded Systems giving you buzz feeling of reading. The author conveys their point in certain way that can be understood simply by anyone who read this because the author of this publication is well-known enough. This kind of book also makes your own vocabulary increase well. Therefore it is easy to understand then can go along, both in printed or e-book style are available. We recommend you for having this particular Hardware/Software Co-Design for Data Flow Dominated Embedded Systems instantly.

James Batts:

Do you have something that you enjoy such as book? The book lovers usually prefer to decide on book like comic, brief story and the biggest you are novel. Now, why not hoping Hardware/Software Co-Design for Data Flow Dominated Embedded Systems that give your pleasure preference will be satisfied simply by reading this book. Reading practice all over the world can be said as the means for people to know world far better then how they react in the direction of the world. It can't be explained constantly that reading habit only for the geeky person but for all of you who wants to always be success person. So , for all of you who want to start looking at as your good habit, you can pick Hardware/Software Co-Design for Data Flow Dominated Embedded Systems become your own personal starter.

Hoyt Knapp:

Many people spending their time period by playing outside along with friends, fun activity together with family or just watching TV all day every day. You can have new activity to invest your whole day by examining a book. Ugh, think reading a book will surely hard because you have to take the book everywhere? It all right you can have the e-book, having everywhere you want in your Smartphone. Like Hardware/Software Co-Design for Data Flow Dominated Embedded Systems which is finding the e-book version. So , try out this book? Let's see.
